Pintexx GmbH is a software company focused on text processing, text optimization and text components.

Our products are well-established in more than 60 countries and used by hundreds of customers and hundreds of thousands of users.

Our strategy bases on components which are independent of any system and browser for different desktop technologies like **.Net/WPF/ActiveX** and web technologies like **ASP.Net, JSP** with a highly developed user interface.

Hans-Peter Burk
Managing Director

pinEdit

As a professional HTML Editor **pinEdit** has all features for web designers – and it is as easy to use as “Word“ for the inexperienced User – through its unique word processing mode. Designing of HTML pages has never been so easy before like with **pinEdit**

- 2 Modes: “Expert Mode” and “Word processing Mode“
- High-quality design
- GUI like a desktop product
- Maximum customization
- Most simple integration and highest security

100% support

Because we are ourselves software developers we know how important support is. Therefore we respond quickly and competent to all of your inquiries.

100% customer orientation

For Pintexx your demands are on the highest importance. We lay ourselves open to your ideas and realize them into reality.

With pinEdit you purchase a developer product, which you can configure and customize as desired.

Facts and Features

Zero Install (web)

Pure (D) HTML – No installation of further software required.

Security (web)

No Applet, No ActiveX, No plug-in
No additional browser settings required

Performance (web)

Under default conditions the editor loads in < 1 second.

Browser (web)

Supports all important browsers
IE, Firefox, Safari.
One of the best implementations for FireFox.

like

Technologies / Platforms

No other product supports so many platforms/technologies and is independent of a platform. Interfaces for ASP.Net, ASP, JSP, PHP, .Net, ActiveX are available.
The following operating systems are supported: Windows, Unix, Linux, OS X.
For each technology there are code samples available.

Simple integration

For the most popular technologies pinEdit offers interfaces. So each developer can work in his intimate environment.

Maximal customization

Individual customization of toolbar, menu, context menu through object orientated scripts or XML. About 100 Client and Server API functions are available.

Rich Toolbar Objects

The toolbar offers rich objects like menu buttons or style dropdown. It can be extended by own functions and existing functions can be replaced.

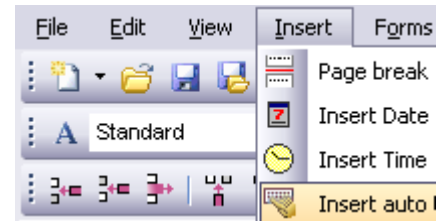

Special functions for the user

GUI on the highest level

“The quality of the designs and the operation is a standard for the quality of the products.”

Design and usability is at the level of high-quality Windows application.
5 predefined Designs for selection.

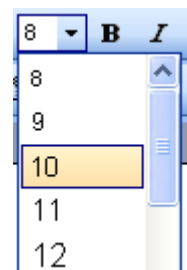

Word processor and HTML mode

The word processor mode allows text editing without knowing anything about HTML.
The HTML mode allows editing of each HTML tag and attributes and styles.

All font sizes

All font sizes are available and the unit of measurement can be configured (px, pt etc)
pinEdit uses style formatting – thereby any font sizes can be set (not only 7 like with font tags).

CSS Styles

pinEdit offers extensive support for style sheets:

Inline styles as well as references to external style sheet files are supported. The relative mode supports also external, relative references.

All styles which are included in the document are automatically indicated in an appropriate list. Texts can be formatted in any way. The formatting can also be removed within a formatted section/paragraph.

Tables

Extensive table support:

The table functions are both available in the toolbar and as context menu. All standard functions like adding and deleting rows are supported.

When the border of a table is set to 0, the margin of the table

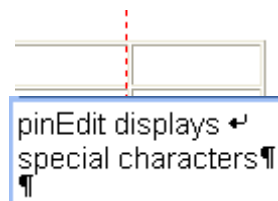

will appear as a broken line

to indicate that the table is invisible..

Extended editing functions

- The width of a cell can be set with the mouse cursor
- Indication of all invisible characters i.e. soft and hard breaks.
- Moving of objects with indication of the position
- Ruler

International support

pinEdit supports all characters and can therefore be used international.

All dialogues, menus and context menus support localization. New languages can be added easily.

MS Office support

Content of MS Word, Excel etc. can be copied with cut/paste in the editor.

This can be done both directly and through removing Word specific attributes. Both copy and follow-up processing of Word is possible in a separate window.

HTML Optimizer (web)

The HTML optimizer repairs invalid HTML code and optimize for best editor usage.

It is perfectly suited for using data from external sources like MS Word.

Important features for developers:

Total content/body only

pinEdit allows both the processing of the whole HTML content and of the BODY content only. Therefore it is ideally suitable for CMS systems or the processing of complete sites.

Optimized HTML code

The cleaner and the HTML optimizer guarantee best HTML code.

XHTML 1.1 support

pinEdit provides the content in following formats: HTML, HTML Body, XHTML, XHTML Body, Text.

Relative Mode

pinEdit allows entering URLs relatively in the document and to process through setting a basic URL to which all URLs are relative. Therefore the site is

```

```

independent of domains etc.
Every kind of relative URL is supported.

HTML area

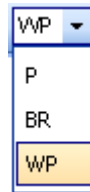

The HTML area offers several options: By default the HTML code is displayed with indentation and syntax coloring of tags and attributes.

```
<span style="FONT-SIZE: 24pt">
  <img style="LEFT: 1px; WIDTH:
  <br>
</span>
```

Line break mode

pinEdit offers 3 different options for line breaks.

The BR mode for classic applications where a BR tag is used for line break. The P mode where a paragraph tag is used for line breaking and the WP mode where a p tag in combination with line height attributes are used. The WP mode simulates a behaviour like in a word processor.

XML toolbar definition

pinEdit allows 2 different ways of defining toolbars. For customizing any toolbar detail the XML toolbar is offered.

Upload in sub folders (web)

pinEdit allows uploading of files in any sub folder.

Object oriented styles

pinEdit allows using styles depending on objects like tables, cells etc. The styles are dynamically listed in style dropdown and are assigned to corresponding object.

Rich server and client API (web)

pinEdit offers a rich set of client (>100) and server API functions for optimized customizing.

Professional add-ins:

pinEdit offers professional add-ins like:

pinEditSpell - spell checker

The spell checker offers high performance spell checking and dictionaries for different languages and can also use MS Word dictionaries. Additionally the dictionary manager can import OpenOffice dictionaries.

pinEditUpload - Upload tool (web)

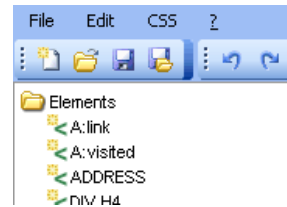

The upload tool allows multiple files select and multiple file upload as well as a progress bar and a lot of more features.

| Files to upload (8 KB): | | |
|-------------------------|------|--|
| Name | Size | |
| autotext.gif | 1 KB | |
| back.gif | 1 KB | |
| cell.gif | 1 KB | |
| empty.gif | 1 KB | |
| file_delete.gif | 1 KB | |

pinEditStyle – Stylesheet editor (web)

The style sheets editor allows editing CSS based style sheets that are integrated as external resource.

pinEditStyle allows editing in design and source mode and includes a CSS validator.

pinEdit features:

| Unique Features | Description |
